

Description

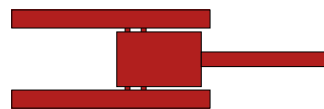

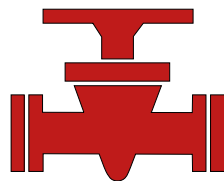

Stramek C1 is a Universal Paper-Mill and Sugar-Mill Packing, made of a unique Aramidic composite fibre. This special fibre combines an exceptionally high tensile strength (27,000 Kg/cm²), outstanding heat resistance, linked to low friction and excellent cool running properties.

This is a strong Thermoset Fibre Packing but it is also extremely soft, assisted by our exclusive, three stage lubrication process. The low-friction factor reduces abrasion by up to 1/10th that of Aramidic Fibres, giving high reliability and life, even in the most demanding of applications. STK C1 is heat resistant and will not glaze, like usual Paper Mill and PTFE Packings, even at high shaft speeds.

Applications

Universal Paper-Mill, Sugar-Mill and demanding application Packing, that is non-staining, with excellent chemical resistance and is suitable for Kraft processes. Easy to cut and install, fast to break-in and with low susceptibility to adverse conditions, at installation or in-use.

Operating Limits

	Valve	Piston	Pump
Temperature		-50°C - +250°C	
Pressure Rating		130 Bar	
Rotary Speed		20 M/S	
pH Range		2 - 12
